Re: Project Agreement Assignment – Basis & Justification

Project Agreement No.: 16-012-HS

Project Agreement Title: Sawgrass Deep Injection Well Operating Permit Renewals

The Utilities Department has assigned engineering professional services work for renewing the Florida Department Of Environmental Protection Operating Permits to Hazen and Sawyer, P.C. The basis and justification for this assignment follow.

Basis

The City's Sawgrass Water and Wastewater Treatment Plant utilizes four deep injection wells (three effluent disposal wells discharge treated wastewater and one industrial injection well discharges concentrate from the water treatment plant) which require operation permit renewals every five (5) years pursuant to provisions in Chapter 62-528.640 Florida Administrative Code.

Justification

Hazen and Sawyer professionals renewed the City's operating permits five years ago and are familiar with the requirements of the FDEP in order to obtain these renewals. This assignment has been evaluated for compliance with the objective of equitable distribution of work to the various design consultants engaged, and is consistent with that objective.
